| | | | | | | | | | | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | | | | | | | | | |

The Cholesky decomposition (an example)

$$\Sigma = \begin{pmatrix} 6 & 15 & 55 \\ 15 & 55 & 225 \\ 55 & 225 & 979 \end{pmatrix} = \begin{pmatrix} 6 \\ 15 \end{pmatrix}$$

$$L_{11} = \sqrt{6_{11}} = \sqrt{6} = 2.4495, L_{12} = L_{12} = 0$$

$$L_{21} = \frac{6_{21}}{L_{11}} = \frac{15}{2.4455} = 6.1237$$

$$L_{22} = \sqrt{6_{22} - L_{21}^2} = \sqrt{65 - (6.1237)^2} = 4.1833, L_{23} = 0$$

$$L_{31} = \frac{6_{31}}{L_{11}} = \frac{55}{2.4455} = 22.4537$$

$$L_{32} = \sqrt{6_{32} - L_{31}^2 L_{21}} = 20.9165$$

$$L_{33} = \sqrt{6_{32} - L_{31}^2 L_{21}} = 20.9165$$

$$L_{33} = \sqrt{6_{32} - L_{31}^2 L_{21}} = 6.1101$$

$$\lambda = \begin{pmatrix} 2.4495 & 0 & 0 \\ 6.1277 & 4.1233 & 0 \\ 0.1277 & 4.1233 & 0 \\ 22.4537 & 20.9165 & 6.1101$$

$$\lambda = L \vec{X} + \vec{J} \Rightarrow \vec{Y} \sim N(\vec{J}^2, \vec{\Sigma})$$

The spectral decomposition

Every real symmetric $n \times n$ matrix can be factored as

$$\Sigma = U\Lambda U^T$$

- U = orthogonal matrix of eigenvectors.
- Λ = diagonal matrix of eigenvalues.

$$P(\lambda) = dit(\Sigma - \lambda I) \Rightarrow P(\lambda) = 0, \quad 1 \leq i \leq d$$

$$U = (\vec{U}_{i}, \vec{U}_{2}, ..., \vec{U}_{d}), \quad \Sigma \vec{u}_{i} = \lambda_{i} \vec{u}_{i}$$

$$also, \quad \vec{U}_{i}^{T} \vec{U}_{i}^{J} = 0, \quad i \neq j, \quad ||\vec{U}_{i}^{T}||^{2} = 1$$

$$A = \begin{pmatrix} \lambda_{i} & 0 \\ 0 & \lambda_{d} \end{pmatrix}$$

$$\Sigma^{1/2} = U A^{1/2} U^{T}, \quad A^{2} = \begin{pmatrix} \sqrt{\lambda_{i}} (\vec{\lambda}_{2}) & 0 \\ 0 & \sqrt{\lambda_{d}} & \sqrt{\lambda_{d}} \\ 0 & \sqrt{\lambda_{d}} & \sqrt{\lambda_{d}} \end{pmatrix}$$

$$\Sigma^{1/2} (\Sigma^{1/2})^{T} = (\Sigma^{1/2})^{2} = \Sigma$$

$$\vec{y} = \Sigma^{1/2} \vec{x} + \vec{\mu} = \lambda \vec{y} \wedge N(\vec{\mu}_{i}, \vec{z})$$
