**Lemma 2.2** Let  $\mathbb{R}^d$  and  $A \in \mathbb{R}^{d \times d}$  be invertible. Define  $\Sigma = AA^{\mathsf{T}} \in \mathbb{R}^d$ . Furthermore, let  $X = (X_1, X_2, \dots, X_d) \in \mathbb{R}^d$  be a random vector such that  $X_1, X_2, \dots, X_d \sim \mathcal{N}(0, 1)$  are independent. Then

$$AX + \mu \sim \mathcal{N}$$

on  $\mathbb{R}^d$ .

$$\overrightarrow{y} = \overrightarrow{A} \overrightarrow{x} + \overrightarrow{\mu} = g(\overrightarrow{x})$$

$$U(\overrightarrow{y}) = \overrightarrow{A}'(\overrightarrow{y} - \overrightarrow{\mu})$$

$$J_{W}(\overrightarrow{y}) = \overrightarrow{A}' \Rightarrow dut(J_{W}y) = dut(\overrightarrow{A}') = (dut(\Sigma))^{\frac{1}{2}}$$

$$\overrightarrow{S}_{\overline{X}}(\overrightarrow{x}) = \prod_{i=1}^{n} \frac{1}{\sqrt{2\pi}} e^{-\frac{x^{2}}{2}} = \frac{1}{(2\pi)} d_{i2} e^{-\frac{1}{2}} e^{-\frac{1}{2}} e^{-\frac{1}{2$$
